1 Making a "GNU release"

- GNU Source Release Collection (GSRC / GNU SRC)
  http://www.gnu.org/software/gsrc/

- goal: make it easy for users to install latest GNU packages from source into their home directories i.e. deal with dependencies

2 Implementation

- Ports system (like BSD)
- resurrected GAR (Nick Moffit) + GARstow enhancements (Adam Sampson)
- GNUMake
- similar to GARNOME for GNOME
- differences
  - uses bzr (not cvs/svn)
  - all packages gpg-checked
  - stow-style install (but using cp --link)
- bzr update ; make install
  # build and install all latest packages
- ~230 packages
