NAME

env_parallel - export environment to GNU parallel

SYNOPSIS

env_parallel [--record-env|--session|--end-session] [options for GNU Parallel]

DESCRIPTION

env_parallel is a shell function that exports the current environment to GNU parallel.

If the shell function is not loaded, a dummy script will be run instead that explains how to install the function.

eenv_parallel is 100 ms slower at startup than pure GNU parallel, and takes up to 30% longer to start a job (typically 15 ms).

Due to the problem with environment space (see below) you are recommended only to transfer the environment that you need.

To help you do that, you can mark names that should not be transferred. This can be done with either --session or --record-env.

# Record the "clean" environment (this only needs to be run once)
eenv_parallel --record-env

# Optionally edit ~/.parallel/ignored_vars (only needed once)

# Define whatever you want to use
myfunc() { myalias and functions $myvar work. $1.; }
alias myalias='echo Aliases'
myvar='and variables'

# Use --env _ to only transfer the names not in the "empty" environment
eenv_parallel --env _ -S localhost myfunc ::: Hooray

Or:

# Do --record-env into $PARALLEL_IGNORED_NAMES
eenv_parallel --session

# Define whatever you want to use
myfunc() { myalias and functions $myvar work. $1.; }
alias myalias='echo Aliases'
myvar='and variables'

# env_parallel will not export names in $PARALLEL_IGNORED_NAMES
eenv_parallel -S localhost myfunc ::: Hooray

# Optionally
eenv_parallel --end-session

In csh --session is not supported:

# Record the "clean" environment - this only needs to be run once
eenv_parallel --record-env

# Optionally edit ~/.parallel/ignored_vars - only needed once
# Define whatever you want to use
alias myalias \'(echo Aliases $myvar \!\!\*\'\).
set myvar='and variables'

# Use --env _ to only transfer the names not in the "empty" environment
env_parallel --env _ -S localhost myalias ::: work

## Environment space

By default `env_parallel` will export all environment variables, arrays, aliases, functions and shell options (see details for the individual shells below).

But this only works if the size of the current environment is smaller than the maximal length of a command and smaller than half of the max if running remotely. E.g. The max size of Bash's command is 128 KB, so `env_parallel` will fail if `set | wc -c` is bigger than 128 KB. Technically the limit is in `execve(1)` which `IPC::open3` uses.

Bash completion functions are well-known for taking up well over 128 KB of environment space and the primary reason for causing `env_parallel` to fail.

Instead you can use `--env` to specify which variables, arrays, aliases and functions to export as this will only export those with the given name. Or follow the recommended usage in shown in DESCRIPTION.

### OPTIONS

Same as GNU `parallel` in addition to these:

--end-session
  Undo last --session

--record-env
  Record all names currently defined to be ignored every time running `env_parallel` in the future.

--session
  Ignore all names currently defined. Aliases, variables, arrays, and functions currently defined will not be transferred.

  But names defined after running `parallel --session` will be transferred.

  This is only valid in the running shell, and can be undone with parallel --end-session.

You can run multiple --session inside each other:

```
env_parallel --session
var=not
  # var is transferred
env_parallel -Slocalhost 'echo var is $var' ::: ignored
env_parallel --session
  # var is not transferred
env_parallel -Slocalhost 'echo var is $var' ::: ignored
env_parallel --end-session
  # var is transferred again
env_parallel -Slocalhost 'echo var is $var' ::: ignored
```

### SUPPORTED SHELLS

Ash
Installation

Put this in $HOME/.profile:

```bash
.env_parallel.ash
```

E.g. by doing:

```bash
echo '. env_parallel.ash' >> $HOME/.profile
```

Supported use

--env is supported to export only the variable, or alias with the given name. Multiple --envs can be given.

--session is supported.

**aliases**

```bash
alias myecho='echo aliases'
env_parallel myecho ::: work
env_parallel -S server myecho ::: work
env_parallel --env myecho myecho ::: work
env_parallel --env myecho -S server myecho ::: work

alias multiline='echo multiline
echo aliases'
env_parallel multiline ::: work
env_parallel -S server multiline ::: work
env_parallel --env multiline multiline ::: work
env_parallel --env multiline -S server multiline ::: work
```

**functions**

```bash
ash cannot list defined functions - thus is not supported.
```

**variables**

```bash
myvar=variables
env_parallel echo '$myvar' ::: work
env_parallel -S server echo '$myvar' ::: work
env_parallel --env myvar echo '$myvar' ::: work
env_parallel --env myvar -S server echo '$myvar' ::: work
```

**arrays**

Arrays are not supported by Ash.

Bash Installation

Put this in $HOME/.bashrc:

```bash
.env_parallel.bash
```

E.g. by doing:

```bash
echo '. env_parallel.bash' >> $HOME/.bashrc
```
Supported use

--env is supported to export only the variable, alias, function, or array with the given name. Multiple --envs can be given.

--session is supported.

aliases

alias myecho='echo aliases'
env_parallel myecho ::: work
env_parallel --env myecho myecho ::: work
env_parallel --env myecho -S server myecho ::: work

alias multiline='echo multiline
  echo aliases'
env_parallel 'multiline {}
  echo but only when followed by a newline' ::: work
env_parallel --env multiline 'multiline {}
  echo but only when followed by a newline' ::: work
env_parallel --env multiline -S server 'multiline {}
  echo but only when followed by a newline' ::: work

functions

myfunc() { echo functions $*; }
env_parallel myfunc ::: work
env_parallel --env myfunc myfunc ::: work
env_parallel --env myfunc -S server myfunc ::: work

variables

myvar=variables
env_parallel echo '$myvar' ::: work
env_parallel --env myvar echo '$myvar' ::: work
env_parallel --env myvar -S server echo '$myvar' ::: work

arrays

myarray=(arrays work, too)
env_parallel -k echo '${myarray[[]]}': 0 1 2
env_parallel -k -S server echo '${myarray[[]]}': 0 1 2
env_parallel -k --env myarray echo '${myarray[[]]}': 0 1 2
env_parallel -k --env myarray -S server 
  echo '${myarray[[]]}': 0 1 2

BUGS

Due to a bug in Bash, aliases containing newlines must be followed by a newline in the command. Some systems are not affected by this bug, but will print a warning anyway.

csh

env_parallel for csh breaks $PARALLEL, so do not use $PARALLEL.
Installation

Put this in $HOME/.cshrc:

```csh
source 'which env_parallel.csh'
```

E.g. by doing:

```csh
echo 'source `which env_parallel.csh`' >> $HOME/.cshrc
```

Supported use

`--env` is supported to export only the variable, alias, or array with the given name. Multiple `--envs` can be given.

**aliases**

```csh
alias myecho 'echo aliases'
env_parallel myecho ::: work
env_parallel -S server myecho ::: work
env_parallel --env myecho myecho ::: work
env_parallel --env myecho -S server myecho ::: work
```

**functions**

Not supported by `csh`.

**variables**

```csh
set myvar=variables
env_parallel echo '$myvar' ::: work
env_parallel -S server echo '$myvar' ::: work
env_parallel --env myvar echo '$myvar' ::: work
env_parallel --env myvar -S server echo '$myvar' ::: work
```

**arrays with no special chars**

```csh
set myarray=(arrays work, too)
env_parallel -k echo \$'\{myarray[]\}' ::: 1 2 3
env_parallel -k -S server echo \$'\{myarray[]}\' ::: 1 2 3
env_parallel -k --env myarray echo \$'\{myarray[]}\' ::: 1 2 3
env_parallel -k --env myarray -S server 
  echo \$'\{myarray[]}\' ::: 1 2 3
```

Dash

Installation

Put this in $HOME/.profile:

```csh
.env_parallel.dash
```

E.g. by doing:

```csh
echo '. env_parallel.dash' >> $HOME/.profile
```

Supported use

`--env` is supported to export only the variable, or alias with the given name. Multiple `--envs` can be given.

`--session` is supported.
GNU Parallel with environment

aliases

alias myecho='echo aliases'
env_parallel myecho ::: work
env_parallel -S server myecho ::: work
env_parallel --env myecho myecho ::: work
env_parallel --env myecho -S server myecho ::: work

alias multiline='echo multiline
    echo aliases'
env_parallel multiline ::: work
env_parallel -S server multiline ::: work
env_parallel --env multiline multiline ::: work
env_parallel --env multiline -S server multiline ::: work

functions

dash cannot list defined functions - thus is not supported.

variables

myvar=variables
env_parallel echo '$myvar' ::: work
env_parallel -S server echo '$myvar' ::: work
env_parallel --env myvar echo '$myvar' ::: work
env_parallel --env myvar -S server echo '$myvar' ::: work

arrays

dash does not support arrays.

fish

Installation

Put this in $HOME/.config/fish/config.fish:

    source (which env_parallel.fish)

E.g. by doing:

    echo 'source (which env_parallel.fish)'
    >> $HOME/.config/fish/config.fish

Supported use

--env is supported to export only the variable, alias, function, or array with the given name. Multiple
--envs can be given.

--session is supported.

aliases

alias myecho 'echo aliases'
env_parallel myecho ::: work
env_parallel -S server myecho ::: work
env_parallel --env myecho myecho ::: work
env_parallel --env myecho -S server myecho ::: work

functions

    function myfunc
echo functions $argv
end
env_parallel myfunc ::: work
env_parallel -S server myfunc ::: work
env_parallel --env myfunc myfunc ::: work
env_parallel --env myfunc -S server myfunc ::: work

variables

set myvar variables
env_parallel echo '$myvar' ::: work
env_parallel -S server echo '$myvar' ::: work
env_parallel --env myvar echo '$myvar' ::: work
env_parallel --env myvar -S server echo '$myvar' ::: work

arrays

set myarray arrays work, too
env_parallel -k echo '$myarray[[]]'' ::: 1 2 3
env_parallel -k -S server echo '$myarray[[]]'' ::: 1 2 3
env_parallel -k --env myarray echo '$myarray[[]]'' ::: 1 2 3
env_parallel -k --env myarray -S server \n echo '$myarray[[]]'' ::: 1 2 3

ksh

Installation

Put this in $HOME/.kshrc:

source env_parallel.ksh

E.g. by doing:

echo 'source env_parallel.ksh' >> $HOME/.kshrc

Supported use

--env is supported to export only the variable, alias, function, or array with the given name. Multiple 
--envs can be given.

--session is supported.

aliases

alias myecho='echo aliases'
env_parallel myecho ::: work
env_parallel -S server myecho ::: work
env_parallel --env myecho myecho ::: work
env_parallel --env myecho -S server myecho ::: work

alias multiline='echo multiline
echo aliases'
env_parallel multiline ::: work
env_parallel -S server multiline ::: work
env_parallel --env multiline multiline ::: work
env_parallel --env multiline -S server multiline ::: work

functions

myfunc() { echo functions $*; }
variables

```
myvar=variables
env_parallel echo '$myvar' :::: work
env_parallel -S server echo '$myvar' :::: work
env_parallel --env myvar echo '$myvar' :::: work
env_parallel --env myfunc -S server myfunc :::: work
```

arrays

```
myarray=(arrays work, too)
env_parallel -k echo '$_{myarray[0]}$_' :::: 0 1 2
env_parallel -k -S server echo '$_{myarray[0]}$_' :::: 0 1 2
env_parallel -k --env myarray echo '$_{myarray[0]}$_' :::: 0 1 2
env_parallel -k --env myfunc -S server \
  echo '$_{myarray[0]}$_' :::: 0 1 2
```

mksh

Installation

Put this in $HOME/.mkshrc:

```
source env_parallel.mksh
```

E.g. by doing:

```
echo 'source env_parallel.mksh' >> $HOME/.mkshrc
```

Supported use

--env is supported to export only the variable, alias, function, or array with the given name. Multiple --envs can be given.

--session is supported.

aliases

```
alias myecho='echo aliases'
env_parallel myecho :::: work
env_parallel -S server myecho :::: work
env_parallel --env myecho myecho :::: work
env_parallel --env myfunc -S server myfunc :::: work
```

```
alias multiline='echo multiline
  echo aliases'
env_parallel multiline :::: work
env_parallel -S server multiline :::: work
env_parallel --env multiline multiline :::: work
env_parallel --env multiline -S server multiline :::: work
```

functions

```
myfunc() { echo functions $*; }
env_parallel myfunc :::: work
env_parallel -S server myfunc :::: work
```
GNU Parallel with environment

variables

myvar=variables
env_parallel echo '$myvar' :::: work
env_parallel -S server echo '$myvar' :::: work
env_parallel --env myvar echo '$myvar' :::: work
env_parallel --env myvar -S server echo '$myvar' :::: work

arrays

myarray=(arrays work, too)
env_parallel -k echo '${myarray[{}]}' :::: 0 1 2
env_parallel -k -S server echo '${myarray[{}]}' :::: 0 1 2
env_parallel -k --env myarray echo '${myarray[{}]}' :::: 0 1 2
env_parallel -k --env myarray -S server \ echo '${myarray[{}]}' :::: 0 1 2

pdksh

Installation

Put this in $HOME/.profile:

source env_parallel.pdksh

E.g. by doing:

echo 'source env_parallel.pdksh' >> $HOME/.profile

Supported use

--env is supported to export only the variable, alias, function, or array with the given name. Multiple --envs can be given.

--session is supported.

aliases

alias myecho="echo aliases";
env_parallel myecho :::: work;
env_parallel -S server myecho :::: work;
env_parallel --env myecho myecho :::: work;
env_parallel --env myecho -S server myecho :::: work

functions

myfunc() { echo functions "$*"; };
env_parallel myfunc :::: work;
env_parallel -S server myfunc :::: work;
env_parallel --env myfunc myfunc :::: work;
env_parallel --env myfunc -S server myfunc :::: work

variables

myvar=variables;
env_parallel echo "$myvar" :::: work;
env_parallel -S server echo "$myvar" :::: work;
env_parallel --env myvar echo "$myvar" :::: work;
env_parallel --env myvar -S server echo "\$myvar" ::: work

arrays
myarray=(arrays work, too);
env_parallel -k echo "\${myarray[{}]}" ::: 0 1 2;
env_parallel -k -S server echo "\${myarray[{}]}" ::: 0 1 2;
env_parallel -k --env myarray echo "\${myarray[{}]}" ::: 0 1 2;
env_parallel -k --env myarray -S server \
echo "\${myarray[{}]}" ::: 0 1 2.

sh
Installation
Put this in $HOME/.profile:

. env_parallel.sh

E.g. by doing:

echo '. env_parallel.sh' >> $HOME/.profile

Supported use
--env is supported to export only the variable, or alias with the given name. Multiple --envs can be given.
--session is supported.
aliases
sh does not support aliases.

functions
myfunc() { echo functions $*; }
env_parallel myfunc ::: work
env_parallel -S server myfunc ::: work
env_parallel --env myfunc myfunc ::: work
env_parallel --env myfunc -S server myfunc ::: work

variables
myvar=variables
env_parallel echo ' $myvar' ::: work
env_parallel -S server echo ' $myvar' ::: work
env_parallel --env myvar echo ' $myvar' ::: work
env_parallel --env myvar -S server echo ' $myvar' ::: work

arrays
sh does not support arrays.

tcsh
env_parallel for tcsh breaks $PARALLEL, so do not use $PARALLEL.
Installation
Put this in $HOME/.tcshrc:
source `which env_parallel.tcsh`

E.g. by doing:

echo `source `which env_parallel.tcsh'` >> $HOME/.tcshrc

**Supported use**

`--env` is supported to export only the variable, alias, or array with the given name. Multiple `--envs` can be given.

**aliases**

```plaintext
alias myecho 'echo aliases'
env_parallel myecho ::: work
env_parallel -S server myecho ::: work
env_parallel --env myecho myecho ::: work
env_parallel --env myecho -S server myecho ::: work
```

**functions**

Not supported by tcsh.

**variables**

```plaintext
set myvar=variables
env_parallel echo '$myvar' ::: work
env_parallel -S server echo '$myvar' ::: work
env_parallel --env myvar echo '$myvar' ::: work
env_parallel --env myvar -S server echo '$myvar' ::: work
```

**arrays with no special chars**

```plaintext
set myarray=(arrays work, too)
env_parallel -k echo '$\{myarray[{}]\}' ::: 1 2 3
env_parallel -k -S server echo '$\{myarray[{}]\}' ::: 1 2 3
env_parallel -k --env myarray echo '$\{myarray[{}]\}' ::: 1 2 3
env_parallel -k --env myarray -S server \\
  echo '$\{myarray[{}]\}' ::: 1 2 3
```

**Zsh**

**Installation**

Put this in $HOME/.zshrc:

```zsh
. env_parallel.zsh
```

E.g. by doing:

```bash
echo '. env_parallel.zsh' >> $HOME/.zshenv
```

**Supported use**

`--env` is supported to export only the variable, alias, function, or array with the given name. Multiple `--envs` can be given.

`--session` is supported.

**aliases**

```plaintext
alias myecho='echo aliases'
env_parallel myecho ::: work
```
GNU Parallel with environment

env_parallel -S server myecho ::: work
env_parallel --env myecho myecho ::: work
env_parallel --env myecho -S server myecho ::: work

alias multiline='echo multiline
echo aliases'
env_parallel multiline ::: work
env_parallel -S server multiline ::: work
env_parallel --env multiline multiline ::: work
env_parallel --env multiline -S server multiline ::: work

functions

myfunc() { echo functions $*; }
env_parallel myfunc ::: work
env_parallel -S server myfunc ::: work
env_parallel --env myfunc myfunc ::: work
env_parallel --env myfunc -S server myfunc ::: work

variables

myvar=variables
env_parallel echo "$myvar" ::: work
env_parallel -S server echo "$myvar" ::: work
env_parallel --env myvar echo "$myvar" ::: work
env_parallel --env myvar -S server echo "$myvar" ::: work

arrays

myarray=(arrays work, too)
env_parallel -k echo "${myarray[[]]}" ::: 1 2 3
env_parallel -k -S server echo "${myarray[[]]}" ::: 1 2 3
env_parallel -k --env myarray echo "${myarray[[]]}" ::: 1 2 3
env_parallel -k --env myarray -S server \echo "${myarray[[]]}" ::: 1 2 3

EXIT STATUS

Same as GNU parallel.

AUTHOR
